Wireless Connectivity Issues 2019/08/02

I am having connectivity issues with my Toshiba Satellite. The machine runs just fine and does not drop from the internet when I am in the same room as the router (I am working wireless). Once I bring the machine to another part of the house say within 20 feet, my machine drops from the Internet. I have a second computer that I use that is also wireless and the machine does NOT drop from the internet regardless of where I place it in the house. I have replaced the router (provided by Verizon) and I spent 2 hours on the phone with Microsoft and they could not find anything wrong. So, I am thinking it is some kind of hardware issue.
